

**Manufacturer of Steel Structures,
Windows, Doors, Facade
Heavy Industrial Equipment**

ARAN SAGE Co., in association with her European alliances, is a manufacturing and construction company providing high quality engineering, procurement and construction services for both local and overseas markets.

We have devoted invaluable investment in modern machinery and state of the art technology from Germany, and recruited professional Iranian and European expertise, to establish an advanced industrial complex in Iran; to offer our customers the benefits of customization, quality and availability.

We offer diversified engineering and construction management services that not only provide creative concepts and innovative details to make any creative architecture possible, but also, as a result of a value engineering process, provide economic benefits for our clients, in order to reduce their cost. Aran Sage Co. has created strategic alliances with highly technical companies, forming the Aran Sage Group, to better serve its customers needs.

Aran Sage Co. is a private company and the area of factory is 100/000 m² with 55000 m² roofed shop halls with 40 sets roof cranes from 5 tons to 25 tons capability.

The main production is as follow:

- 1. Steel structure**
- 2. Facade, window and door**
- 3. Industrial heavy equipment (Vessel, storage tank, stack, ...)**

Aran Sage established a new big hall for manufacturing of industrial equipments (vessels, stack, storages tanks, ...) with all required machineries. The main Machines, is rolling machine, rotators, CNC cutting machine, automatic welding machines, and also separated roofed hall for blasting, painting and metalizing. The improgress project is wind turbines tower for SANA with about 1400 tons weight. The considered capability for this production is 3000 tons per year.

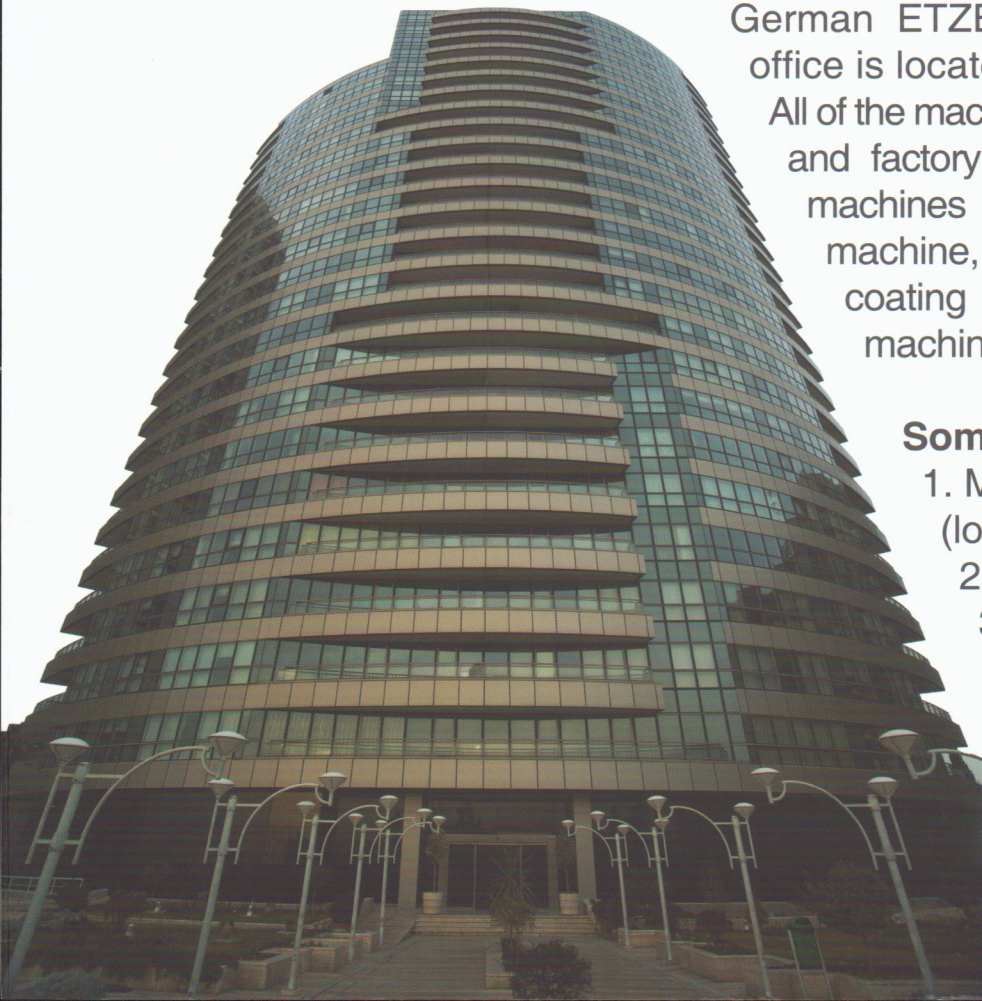

Facade, windows and door

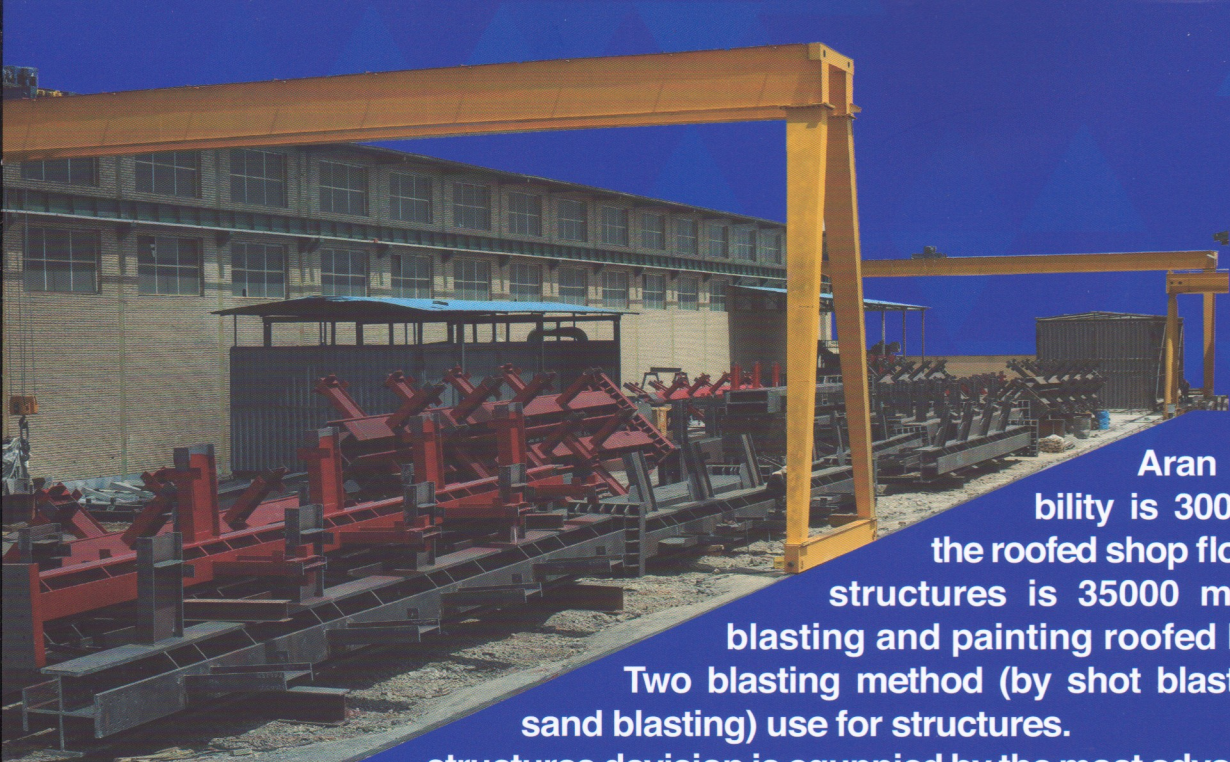

For engineering and designing activities of facade, windows and door, Aran Sage is jointed by German ETZEL Co. and the Aran sage head office is located in stuttgart city.

All of the machines are made by german companies and factory is equipped by the most advanced machines such as waterjet, CNC cutting machine, elomatic SPZ machines, powder coating automatic systems, press break machines, ... etc.

Some of the Main Projects:

1. Milad International tower project (lobby, shaft, basket, tiers and dome)
2. Mahestan B3 tower project
3. Tehran International tower project
4. Rayan Vanak tower project
5. Baghe Behesht project
6. Imam Reza block G1 project

Aran Sage structures capability is 3000 tons per month and the roofed shop floor for manufacturing of structures is 35000 m² with the separated blasting and painting roofed halls.

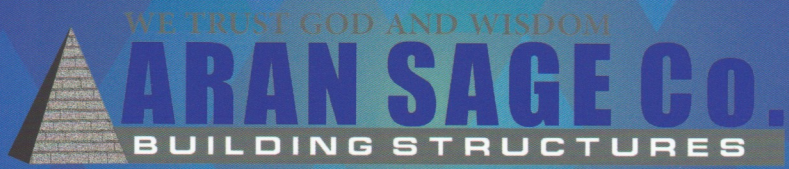

Two blasting method (by shot blast machine and manual sand blasting) use for structures.

structures devision is equipped by the most advanced machineries such as KALTEN BATCH machines plasma high process speed plate, CNC cutting machines, press and shear break machines, H beam maker and box maker machines, all types of welding machines, drilling CNC machines, CNC punch machines, ... etc.

Some of the main projects:

1. Hotel Rotana steel structures
2. Baghe Behesht project
3. South Pars gas field phase 14
4. Abali athletic hotel for national Iranian oil company
5. Steel industry complexes
6. Atieh Hospital project
7. NGI 3200 PIPERACKS
8. Extension of Fardis bridge

4th. West St., Safadasht Industrial Zone
Shahriyar, Tehran, Iran.
